Course Objectives – Objectifs du cours :
The course aims at providing the students with a coherent framework to interpret macroeconomic data. It will introduce concepts of:
- Aggregate demand
- Aggregate supply
- General equilibrium
- Nominal rigidities

It will then discuss the theory and practice of economic policies (e.g. monetary and fiscal policies).
During classes students will be confronted to both theory and data, such that the link between theory and empirical evidence will be constant. At the end of the course, students should master the concepts of aggregate demand, aggregate supply, general equilibrium, and should know how to use the basic macroeconomic framework to put structure on the data.

Prerequisites – Pré requis :
Basic optimization and Microeconomics.
